The forage harvester is equipped with double attachments to the machine, it can be mounted centrally or moved with a 16cm overhang to the right; this solution is useful in those situations where you want to mow well beyond the width of the roadway, for example near ditches, while keeping the wheels in a safe position.

It is equipped with a rear roller and anti-scalp with rapid rack height adjustment. The front wheels are solid anti-puncture.

The reduction gear of the shredder is a bevel gear with helical teeth in an oil bath, to ensure low noise during work.

The mulcher is also equipped with a blade brake, side skids, shredding bar, anti-roll protection behind the wheel spindles, and an adjustable cutting chamber front bulkhead.

The "straight" knife scarifier kit is optional.
