ABOUT THE POWER CLAW™

The Power Claw multi task attachment is built to perform almost any job on your tractor, telehandler or skid steer!

With the clearing ability of a stick rake & the versatility of the grab, this attachment has what it takes to make any job easy, from moving logs, trash, bales, rocks, ripping roots & more!

MODELS

POWER CLAW (Mid Range)

- ✓ Built to suit tractors 45hp to 75hp
- ✓ Available 1.5m & 1.8m wide
- ✓ Weighs 270kg to 300kg
- ✓ 12mm thick tines are made from AR450 high tensile steel

POWER CLAW (Full Size)

- ✓ Built to suit Tractors, Telehandlers & Skidsteers
- ✓ Available 1.8m & 2.4m wide
- ✓ Weighs 420kg to 550kg
- ✓ 16mm thick tines are made from AR450 high tensile steel

MODEL	DESCRIPTION	WEIGHT (KG)	TRACTOR HP GUIDE*
PCM150	1.5m Power Claw (MID RANGE)	270	45 - 75
PCM180	1.8m Power Claw (MID RANGE)	300	45 - 75
PC180	1.8m Power Claw (FULL SIZE)	420	80+
PC240	2.4m Power Claw (FULL SIZE)	550	115+

*Tractor HP Guide is a loose guide focused on tractors only. Other factors such as loader lift capacity have more impact on the suitability than hp. Recommended HP is totally irrelevant when used in regard to Skid steers & Telehandlers which are compatible with the full size models.

“It’s probably been the best attachment we’ve bought for the skidsteer”

Ben Lawson | Stuart Town, NSW

KEY FEATURES OF THE POWER CLAW

These are just some of the things that make the Power Claw the leader of it’s type!

1. AR450 Grade Steel Tines

Power Claw tines are made from 16mm AR450 grade high tensile steel, making it the strongest claw/grab.

2. Tine Bracing

Tines are braced to provide maximum support, preventing tine splaying when handling rocks etc.

3. Interlocking Tines

Tines interlock to provide excellent grip on the product being handled, making it ideal for handling fine material.

4. Optimum Tine Spacing

Tines are spaced evenly apart to ensure smaller branches & twigs can be picked up while allowing fine trash flow when raking.

5. Hydraulic Protection

The Power Claw features powerful hydraulic rams & quality hosing. Rams are located to the rear away from the working area.

6. Excellent Pin Geometry

Clever pin geometry on the Power Claw enables a large open width of 1300mm while providing maximum direct clamp force without the use of toggles.

APPLICATIONS

Just 'some' of the things the Power Claw is used for every day across farms in Australia & New Zealand!

1. Log Clawing

With a high clamping force the Power Claw is ideal for handling logs, posts & similar products.

2. Root Raking

Optimum spaced tines & flat ground base ensure the Power Claw can rake like any root rake.

3. Scrub Clawing

Interlocking tines along with the optimum spacing mean the Power Claw can simply pull any scrub or bush from the ground!

4. Rubble Clearing

Handle anything from steel posts to concrete rubble on demolition sites or building deconstruction.

5. Trash Clearing

Smaller trash such as plant matter, bark & twigs can also be easily handled with the Power Claw.

6. Rock Claw

Overall heavy duty build & ergonomic design mean rocks & small to medium boulders can be handled with ease.

"Nothing compared to the Power Claw, being able to pick up large logs, lots of loose material..."

Jason Conn | Blayney, NSW
